# Sustainable manufacturing

Specialising in the manufacture, supply and installation of commercial Christmas lighting, Lincoln-based Fizzco joined Zellar in 2023 thanks to a Greater Lincolnshire-sponsored licence programme.

Since starting its sustainability journey Fizzco has installed EV chargers, low energy fridges and LED lighting and sensors. It's complemented this investment through behavioural change and implementing Zellar's regular energy checking protocols.

## TESTIMONIAL

"We signed up, received our sustainability score, and immediately shared this as evidence for our client. After successfully being awarded the contract, we knew that this platform would become a regular audit for our business. Now, when sending out a tender, as well as including our health and safety documents, accounts, and risk assessments, we without fail also include our Zellar score."
